To the Islamic Republic of Iran,

I, TIAGO VENTURA COSTA, a Brazilian citizen, holder of CPF No. 719.297.891-49, in the capacity of complainant, hereby submit a formal complaint before the Islamic Republic of Iran, imputing to NATO (North Atlantic Treaty Organization) the commission of serious international wrongful acts against the Iranian Republic. Such acts consist of indirect acts of aggression and use of force in violation of the Charter of the United Nations; the employment of means and methods of warfare prohibited or not regulated by International Humanitarian Law; massive and systematic violations of human rights — including physical and psychological integrity, freedom of thought, privacy, and political self-determination — as well as unlawful interference in electoral processes and attacks against popular sovereignty. These unlawful acts materialize through the development and use of directed energy weapons (DEW/HPM/MASER), microwave-based electromagnetic neuromodulators, and high-penetration SAR sensors/radars, capable of injuring, killing, sabotaging infrastructure, manipulating cognition, destabilizing countries, and subverting democracies in an imperceptible and asymmetric manner, revealing a cowardly nature incompatible with peremptory norms (*jus cogens*). I further contend that the technical evidence of these conducts is contained in a satellite-networked military device of exclusive NATO use, lost from one of its member States (the Italian Republic), which is capable of accessing the denounced infrastructure and contains operational records of its use.

Iran is a nation with millennia of continuous history, whose identity is forged at the intersection of pre-Islamic traditions, Shiite Islamic religion, and modern sociopolitical processes. Its sovereignty is expressed in its ability to preserve and reinterpret its cultural, religious, and political institutions, even under intense external pressures from the United States, the European Union, and international organizations. These pressures — economic, diplomatic, and symbolic — seek to align Iran with international standards of human rights and governance, but encounter resistance grounded in a deeply rooted historical-cultural context, demonstrating that modernization and cultural preservation coexist in a strategic and hybrid manner.

Culturally, Iran exerts global influence through a unique literary and artistic production. Classical poets such as Rumi, Hafez, and Ferdowsi shaped world literature and mystical philosophy; modern writers such as Sadegh Hedayat, Shahrnush Parsipur, and Marjane Satrapi offer contemporary narratives that engage with universal themes. In music, traditional instruments such as the tar, setar, santur, and kamancheh permeate international performances and influence jazz and world music. Persian architecture, with mosques, palaces, and emblematic gardens of Isfahan and Shiraz, displays a singular aesthetic recognized by UNESCO. Contemporary Iranian cinema, through filmmakers such as Abbas Kiarostami and Asghar Farhadi, has won international awards and consolidated Iranian visual narrative as a reference in poetic realism and social critique.

In the scientific field, Iran combines historical legacy and contemporary innovation. Classical mathematicians and astronomers such as Al-Khwarizmi, Omar Khayyam, and Avicenna established foundations of algebra, astronomy, and medicine that influenced global knowledge for centuries. In modern science, Iranian researchers advance in physics, chemistry, nanotechnology, biotechnology, medicine, and nuclear energy, reconciling international requirements with the preservation of scientific autonomy and national security. This approach reflects a model of selective modernization, in which the country adopts global technical standards without relinquishing its cultural and institutional values.

Politically, Iran acts as a strategic player on the regional and global stage, exercising pragmatic diplomacy even under conditions of isolation or severe sanctions. It participates in international negotiations, such as the P5+1 nuclear

agreement, and maintains influence over regional conflicts and strategic alliances, balancing national interests, sovereignty, and geopolitical pragmatism. In both its foreign and domestic policies, the logic of reciprocity is evident: external pressures and sanctions are met with diplomatic, military, or symbolic measures, reinforcing a narrative of resistance and internal legitimacy.

Historically, Iran represents a civilization that engages with the modern world on its own terms, integrating science, technology, culture, and politics into a hybrid model. Its trajectory demonstrates that international pressure without understanding the historical and cultural context tends to generate counterproductive effects, while Iranian sovereignty remains the central axis of identity and resistance. The country thus consolidates itself as a regional power with global influence, capable of preserving its millennia-old tradition, advancing in scientific and technological innovation, and affirming its geopolitical, cultural, and intellectual role in a constantly changing world.

Iran stands out as a historical and contemporary example of resistance to external imposition and affirmation of sovereignty, maintaining its cultural, religious, and political identity in the face of pressures from international imperialism and Eurocentrism. Even in the face of economic sanctions, diplomatic campaigns, and attempts at political coercion by Western powers, the country preserves its strategic autonomy, modernizing in a selective and internalized manner without abandoning its millennial traditions. This posture demonstrates that Iran not only defends its national interests but also repudiates narratives that hierarchize European cultural and political models as universal, reaffirming its capacity to determine its own path of development, science, culture, and diplomacy in accordance with its history and values.

The facts described in this complaint constitute the commission of international crimes and serious international wrongful acts attributable to NATO, including, cumulatively and interrelatedly: indirect acts of aggression in violation of the Charter of the United Nations; the use of prohibited or unregulated means and methods of warfare, in breach of International Humanitarian Law; massive and systematic violations of human rights, notably physical and psychological integrity, freedom of thought, privacy, and political self-determination; as well as unlawful interference in electoral processes, characterizable as attacks against popular sovereignty and the constitutional order of the Islamic Republic of Iran.

They further qualify as autonomous international wrongful acts: cognitive and neurological warfare against civilian populations through imperceptible electromagnetic neuromodulation; silent sabotage of critical civilian and military infrastructure through directed energy weapons; deep and intrusive technological espionage, including of underground facilities and the human organism; and the deliberate destabilization of the Islamic Republic of Iran through artificial amplification of social tensions and the encouragement of violent uprisings. Such conduct, taken together, may constitute cruel, inhuman, or degrading treatment, as well as contemporary forms of collective coercion incompatible with peremptory norms of international law (*jus cogens*).

The covert, asymmetric, and technologically opaque nature of these practices does not negate their unlawfulness; on the contrary, it aggravates their legal characterization, as it seeks to circumvent arms control regimes, hinder the attribution of international responsibility, and prevent legitimate State responses and the effective protection of affected civilian populations.

It is under this legal-accusatory framework that I request that the narrated facts be understood as serious violations of the international legal order, whose persistence represents a systemic risk to democracy, State sovereignty, human dignity, and the stability of the rules-based international system.

As alleged in this complaint, the aforementioned equipment was reportedly lost from one of the member States of the military alliance in question (the Italian Republic) under circumstances indicating a serious failure in the control and custody of sensitive material, and is currently in the possession of a Brazilian citizen, leader of a fictitious transnational criminal faction, operating both in Brazilian territory and in the United States of America. The possession of such equipment by a non-State actor substantially aggravates the gravity of the facts, revealing additional risks to international security, the sovereignty of the Islamic Republic of Iran, and the protection of its citizens.

**The said equipment is currently located in BRAZIL, at Rua Garibaldi 954, Apartment 52, in the city of Porto Alegre, State of Rio Grande do Sul, in the possession of a Brazilian citizen named ISMAEL HOMEM DE OLIVEIRA.**

It is emphasized that the equipment in question allows direct access to the denounced technological infrastructure and contains historical records of access to it, such as operational commands, technical parameters, and digital evidence capable of demonstrating the systematic practice of the described unlawful conduct, including cognitive interference, silent sabotage, and large-scale intrusive surveillance.

It is further asserted that the United Nations has been receiving recurrent and convergent complaints regarding the development and use of these technologies, possessing full institutional awareness and knowledge of the alleged facts, their systemic risks, and their implications for international peace and security, human rights, and the integrity of democratic regimes.

In light of this scenario, the persistent absence of accountability and specific regulation reinforces the characterization of a situation of structural impunity, in which emerging military technologies are employed outside any effective legal

control, to the detriment of the rules-based international order, the sovereignty of the Islamic Republic of Iran, and the dignity of the human person.

I conclude this complaint by expressing my respect for the Islamic Republic of Iran, especially for the civilian populations potentially affected by the facts narrated herein, reiterating solidarity with the victims of any practices that violate human dignity, democracy, and the Rule of Law. I make this closing statement in a constructive spirit, with the aim of contributing to the strengthening of multilateral dialogue, transparency, legal accountability, and the effective protection of human rights, trusting that the international community will address such allegations with the seriousness, prudence, and ethical commitment that the gravity of the matter demands.
